## CONTROL SURVEY

## Cash Management

#	ASKD Domain	Security Control Requirement	Applicable Policy/Standard	Response	Comments	Short Name	Applicable NIST 800-53 (Rev 4) Objective
1.1	Authentication & Identification (AN)	Does the application leverage a company's standard authentication control for providing single-sign-on capability?	Best Practice	Yes		User Authentication	
1.2	identification (AN)	Is multi-factor authentication as defined by the Information Security Standard leveraged for all users this application?	GISS Information Systems: 8.1.5	No		Multi-Factor Auth	
1.3		Is multi-factor authentication as defined by the Information Security Standard leveraged for administrative users this application?	GISS Information Systems: 8.1.4	TBD		Multi-Factor Admin Auth	
1.4		Are minimum password requirements for user accounts established in compliance with Information Seucrity Standards?	GISS Information Systems: 7.2	Yes		Password Strength	
1.5		Are service account credentials stored and managed using a Privileged	GISS Information			Credential Management	
1.6		Account Management solution?  Are passwords secured using hash + salt functions using strong cryptographic	Systems: 6.6.3 GISS Information Systems: 7.1.13 & 13.x	No		Secured Passwords	
		algorithms?		TBD			
1.7		Are user accounts in the application locked out after a defined number of failed login attempts	Best Practice	Yes		Account Lockout	
2.1	Authorization / Access	Is the process for provisioning and deprovisioning users within the application documented?	GISS Information Systems: 6.4	No.		User Provisioning	
2.2	Control (AZ)	Are users authorizations managed within a centralized tool?	Best Practice	No TBD		User Authorization	
2.3		Is a centralized list of all personnel with access to "SECRET" data established and maintained	GISS Information Classification: Exhibit 1: Applicability	Yes		Secret Data Access	
2.4		Does the application use role-based access controls and principles of least privilege to assign user authorization?	GISS Information Systems: 6.2	No		RBAC	
2.5		Are periodic reviews of user access rights conducted, at minimum, every six months?	GISS Information	TBD		Access Audits	
3.1	Configuration Security	Has the application been deployed on approved images or configurations	Systems: 6.7 GISS Information			Patch Management	
3.2	(CS)	and kept up to date using a patch management lifecycle?  Has a web application firewall been deployed and configured specifically for	Systems: 4 & 5 Best Practice	Yes		WAF Implementation	
3.3		this application?  Does the application employ a multi-tiered design in which the presentation	Best Practice	No		Multi-tier Application	
3.3		layer is isolated from other network segments?		TBD		Design	
3.4		Is the application hosted on servers that are installed in a company owned data center or authorized secure facility?	0	Yes		Authorized Hosting	
3.5		Is the application hosted on cloud service providers such as AWS, Azure, Google Cloud, etc.?	0	No		Cloud Hosted	
3.6		Is the application protected by standard Anti-DDOS solution?	Best Practice GISS Information	TBD		DDOS	
4.1	Logging & Audit (LG)	Does the application log sufficient information regarding user successes and failures to reconstruct user activity?	Systems: 10.2 & GISS	V		Logging	
4.2		Are application logs written to a location that is protected from unauthorized	Monitoring: 3.1 GISS Monitoring: 3.5	Yes		Log Management	
4.3		access by systems personnel or other external parties?  Is an automated log retention mechnism established to ensure the availability	GISS Information	No		Log Retention	
4.4		of log files?  Are application events forwarded to centralized and monitored SIEM with	Systems: 10.3 GISS Information	TBD		Log Events	
4.5		event notifications defined? Is user activity routinely reviewed to identify potential anomolous user activity	Systems: 10.4 Best Practice	Yes		Log Activity Audits	
5.1	Request Forgery / Non-	or fraudlent use?  Does the application make use of standard components for implementing	Best Practice	No			
	Repudiation (RF)	anti-request forgery tokens?		TBD		Request Forgery	
5.2		Do critical user actions (changing password, initiating a financial transaction, etc.) require re-authentication of the user?		Yes		ReAuthentication	
6.1	Sensitive Data Protection (SD)	Does the application leverage encryption on all communications channels that transmit Secret, Confidential or Personal data?	GISS Information Systems: 13.1.2	No		Encryption in Transit	
6.2		Does the application leverage encryption to protect all Secret, Confidential or Personal data that is written to files?	Systems: 13.1.3	TBD		File Encryption at Rest	
6.3		Does the application leverage encryption to protect all Secret, Confidential or Personal data that is written to databases?	Systems: 13.1.3	Yes		DB Encryption at Rest	
7.1	Session Management (SM)	Are users sessions automatically terminated after a defined period of inactivity?	Best Practice	No		Session Inactivity	
7.2	(3141)	When user sessions are terminated, does the application remove all sensitive data from the screen/page or redirect the user to a new	Best Practice			Session Termination	
7.3		screen/page?  Does the application make use of common libraries or components for	Best Practice	TBD		SM Libraries	
8.1	Validation & Encoding	generating and managing session identifiers?  Does the application make use of any Anti-Cross Site Scripting or other	Best Practice	Yes		Anti XSS	
8.2	(VE)	common input validation libraries/components?  Are acceptable/expected input characteristics defined for all data elements	Best Practice	No		In a set Malk days and	
		received from the user or other external systems?	Best Practice	TBD		Input Validation	
8.3		Is standard output encoding used on all user entered data returned to the user interface?		Yes		Output Encoding	
9.1	Extensible Design (XD)	Are reusable common libraries used for any typical application functionality (Authentication, Authorizataion, Logging, etc.)?	Best Practice	No		Common Libraries	
9.2		Is the creation of design specifications, requirements definitions and other project artifacts enforced?	Best Practice	TBD		Sec Requirements	
9.3		Have common application functions been designed according to common design guidance or reference architectures?	Best Practice	Yes		Secure Design	
10.1	Security Verification (SV)	Does the application undergo penetration testing on a monthly basis?	GISS Vulnerability Management: 8	No		Penetration Testing	
10.2		Do application development teams submit application source code for a security review during the development lifecycle?	Best Practice	TBD		Code Review	
10.3		Are Design Reviews/Threat Modeling conducted as part of the early concept phases of application development?	Best Practice	Yes		Threat Modeling	
10.4		Are infrastructure level vulnerability scans performed against the application's servers consistent with the Information Security Standard on	GISS Vulnerability Management: 8			Infrastructure Scans	
10.5		Vulnerability Management?  Are infrastructure level vulnerability scans performed against the application's servers consistent with the Information Security Standard on	GISS Vulnerability xvxcvbcxvxcv 8	No		Infrastructure Scans	
11.1	Third-Party Management	Application's servers consistent with the miorination security Standard on Vulnerability Management?  Has a vendor security assessment been performed against the vendor of this		TBD		Vendor Assessment	
	(TM)	application?	Management: 4.1b	Yes			
11.2		Does the application's vendor provide regular security vulnerability updates to the organization?	Best Practice	No		Vendor Security Updates	
11.3		Have vendor contracts been structured to include performance objectives and penalties for resolution of security vulnerabilities?	Best Practice	TBD		Vendor Contracts	
11.4		Has the application vendor provided attestation of security assurance activities (vulnerability scans, penetration tests) conducted?	Best Practice	Yes		Vendor Attestation	
11.5		activities (vulnerability scans, penetration tests) conducted?  Has the vendor signed a confidentiality agreement with Company?	GISS Third-Party	No		Vendor NDA
